EDUCATION

University of South Florida

Bachelor of Science, Computer Science

Tampa, FL

Jan 2025 – May 2027

- **Honors & Awards:** Tau Sigma National Honor Society

EXPERIENCE

Undergraduate Researcher

RARE Lab – University of South Florida

Jan 2026 – Present

Tampa, FL

- Helped maintain a multi-modal dialogue system, integrating Google Cloud streaming STT, Gemini LLM reasoning, and OpenAI TTS, which delivered **low-latency** responses for natural **human-robot interaction**.
- Engineered an LLM-based task intent detection system achieving **89% accuracy (F1: 0.91)**, distinguishing task-directed commands from casual conversation for real-time robot task planning.

Key Lead (Retail Manager)

Hollister

Feb 2025 – Present

Wesley Chapel, FL

- Contributed to a **3% year-to-date sales increase (\$70K on \$3.1M revenue)** by driving customer engagement, supporting floor leadership, and optimizing in-store execution.

PROJECTS

Order-in-Store Tracker | JavaScript, HTML, CSS, Firebase, Vite, Vercel

Apr 2026 – May 2026

A retail competition web app used by associates to track OIS sales performance.

- Built and **deployed** a sales competition tracker, **used by 40+ associates** to log daily order-in-store sales, featuring **live leaderboard rankings**, sales-per-hour calculations, and a **PIN-protected** manager admin panel.
- Engineered a **mobile-first UI** with a custom pixel-art arcade theme, persistent Firebase real-time database, competition lifecycle management, and automated Vercel deployment pipeline serving **live production traffic**.

Noctua | Python, OpenCV, MediaPipe, ElevenLabs, Ollama

Mar 2026

A real-time driver drowsiness detection desktop app built in 24 hours at HackUSF 2026.

- Computed **EAR and PERCLOS** fatigue metrics in real-time using MediaPipe Face Mesh at **30fps**.
- Engineered a **staged alert pipeline** with audio escalation and emergency SMS, an LLM-powered voice assistant via Ollama & ElevenLabs TTS, and a post-drive analytics report with matplotlib.

AppNest | Swift, SwiftUI, SwiftData, NaturalLanguage, iOS

Sep 2025 – Mar 2026

An iOS job application tracker with on-device AI email parsing.

- Built **on-device AI email parsing** using Apple's NaturalLanguage framework, extracting job data from pasted confirmation emails with **zero API dependencies**.
- Engineered persistent storage with SwiftData, a centralized design system, and search/sort/filter functionality with status-based filters and a profile stats dashboard.

Hit Song Predictor | Python, scikit-learn, pandas

Jan 2026 – Feb 2026

A machine learning classifier that predicts whether a song will be a hit based on audio features.

- Developed a logistic regression classifier to predict hit songs from **2,000+ tracks** by engineering audio features and optimizing hyperparameters via GridSearchCV, enabling data-driven playlist curation strategies.
- Analyzed feature importance through **coefficient interpretation and odds ratios**, and delivered actionable insights with visualizations (ROC curves, confusion matrices) for music recommendation optimization.

TECHNICAL SKILLS

Programming Languages: C, Swift, Python, C++, Java, JavaScript, RISC-V Assembly

Frameworks & Libraries: HTML, CSS, UIKit, SwiftUI, Scikit-learn, NumPy, pandas, Matplotlib, Ollama, OpenCV, MediaPipe, Firebase

Tools & Platforms: VSCode, Xcode, Jupyter Notebook, Git, GitHub, Linux, Postman, Vercel

Interests: Machine Learning, Human-Robot Interaction, UI/UX
